Manager's Report

Market Review. The HSBC Philippine Local Currency Bond Index gained by 0.25% in September. Yields at the short- and long-end part of the curve went down by 13.2 and 7.1 basis points, respectively, while yields at the belly increased by 12.8 basis points. Overall, yields across the curve were flat for the month.

The Bangko Sentral ng Pilipinas (BSP) adjusted both policy and special deposit accounts rates in its meeting in September. It is the central bank's boldest move this year as its inflation targets continued to be at risk. The BSP hiked key interest rates by 25 basis points, bringing overnight borrowing rate to 4% and SDA rates to 2.5% for all tenors.

In the same meeting, inflation forecasts were raised to 4.5% from 4.33% for this year and to 3.8% from 3.72% for 2015 with inflation at its highest level since October 2011. Though inflation was unchanged at 4.9% in August, average inflation for the year crawled up to 4.4%.

The government posted a P29.9-billion surplus in August as revenues grew 10% to P169.98 billion while expenditures increased at a slower pace to reach only P140.115 billion. Budget deficit through August narrowed to P25.871 billion.

The government maintained its borrowing program for the last quarter at P135 billion. A total of P75-billion worth of 3-, 5- and 7-year bonds and P60 billion in T-Bills will be offered in the next three months.

Fund Performance. The fund gained by 0.24% in September, missing the benchmark by one basis point. It underperforms the benchmark on a year-to-date basis by 233 basis points with a return of 1.56%. Portfolio duration ended lower than the benchmark at the close of the month. The fund's year-to-date underperformance is mainly caused by the benchmark's change in its pricing methodology, which provided a one-time gain for the benchmark. The fund would have underperformed the benchmark on a year-to-date basis by an estimated 71 basis points only, if the one-time gain is excluded.

Fund Strategy. We will maintain portfolio duration as high inflation keeps the BSP in a tightening mode.

Maturity Profile

Any prospective investment shall be limited to the type of investments described in the Declaration of Trust for the Fund.

Risk Disclosure

The Fund is suitable for investors with an aggressive profile or for those who take medium to long-term views. As a marked-to-market UITF, the Fund's net asset value and total return may fall as well as rise as a result of stock prices and interest rates movements. On redemption of units, an investor may receive an amount less than the original amount of investment. Prior to investment in the Fund, the investor shall undergo a client suitability assessment procedure to determine whether the Fund is appropriate for him considering his investment objective, risk tolerance, preferences and experience.

Risk Management

In accordance with the provisions in the Declaration of Trust, the Fund employs a risk management policy based on duration. Duration measures the sensitivity of NAVPU to interest rate movements. As interest rates rise, bond prices fall. The higher the duration, the more NAVPU will fluctuate in relation to changes in interest rates. The Fund may also use financial derivatives to hedge the portfolio against market and credit risks.

¹Returns are net of fees. Past performance is not an indication of future returns.

²Since Inception

³On Oct. 1, 2012, the Fund's benchmark was changed from HSBC Philippines Liquid Bond Index to HSBC Local Currency Bond Index.
