Risk Characteristics

Risk Measures

	Jan 31, 2009	Past 12 Months		
		Low	Hi	Average
Duration	0.75	0.54	2.50	1.43
Volatility, Past 360 Days	1.32%	0.83%	1.32%	1.08%
Sharpe Ratio, Past 360 Days	0.39			

Duration measures the sensitivity of NAVPU to interest rate movements. As interest rates rise, bond prices fall. The higher the duration, the more NAVPU will fluctuate in relation to changes in interest rates. Volatility measures the fluctuations in NAVPU. The higher the number, the higher the potential gain or loss. Sharpe ratio evaluates reward-to-risk efficiency. The higher the number, the higher the reward per unit of risk.

Risk Disclosure

The Fund is suitable for investors who take medium- to long-term views. As a marked-to-market UITF, the Fund's yield, net asset value, and total return may fall as well as rise as a result of interest rate movements and the changes in credit quality of the investments. On redemption of units, an investor may receive an amount less than the original amount of the investment.

Risk Management

In accordance with the provisions in the Declaration of Trust, the Fund implements a risk management policy that applies the principles of Value-at-Risk (VAR). VAR is a measure of the portfolio's maximum potential loss and is computed based on price volatility and market value of the investment portfolio. The Fund's risk management policy prescribes a dynamic volatility band, such that if the volatility of the Fund's investments as reflected in the NAVPU exceeds the volatility band, adjustments are made for the collective interest of the participants. The Fund may also use financial derivatives to hedge the portfolio against market and credit risks.

Fund Manager's Report

Philippine dollar-denominated sovereign bonds fared well in January as we saw some return of risk appetite as investors have started reacting positively to the massive policy rate cuts and government interventions to counter recession. Highlight for the month was the issuance of the new 10-year ROP bond which fetched a yield of 8.50%, at 600bps spread over benchmark US Treasury. The additional supply was well received by the market with the issue oversubscribed at \$6 billion compared to issue size of \$1.5 billion. ROP price movements for the month were mixed but generally higher particularly on the short to medium tenors which increased an average of 1.2%. Long tenor ROP prices however dropped 2.6% for the same period as the market adjusted to the higher yield of the new ROP19. ROP spreads to US Treasuries narrowed as ROP yields declined 19bps while US Treasury yields increased 35bps. Against this backdrop, the Fund continued to outperform benchmark US Treasury bill. We are inclined to gradually increase duration position though still remain cautious on global and local developments, market liquidity, as well as supply risks.
