Fund Manager's Report

USD-denominated ROP bond prices rallied as yields declined by an average of 13bps, supported by increased market liquidity amidst the maturity of the ROP10 Euro and by the successful issuance of Yen-denominated ROP debt. Some investors may have converted the proceeds of the EUR650Mn ROP that matured on February 21 to USD amidst worries over the Euro zone. Fiscal problems in Portugal, Italy, Ireland, Greece and Spain have been in recent focus, leading to speculation of sovereign credit rating downgrades and possible defaults. Meanwhile, the Philippines successfully issued USD1.1Bn worth of Samurai bonds on February 23, thus achieving its foreign borrowing plan for the year.

Against this backdrop, the Fund outperformed the benchmark 3-month US Treasury bill for the month of February.

Net Asset Value Per Unit

Net Asset Value, end-of-quarter **USD 80.92 Million**
 NAV Per Unit (NAVPu) **USD 230.64**
 Par Value **USD 100.00**

Risk Disclosure

The Fund is suitable for investors who take medium to long-term views. As a marked-to-market UITF, the Fund's yield, net asset value, and total return may fall as well as rise as a result of interest rate movements and the changes in credit quality of the investments. On redemption of units, an investor may receive an amount less than the original amount of the investment.

Risk Management

In accordance with the provisions in the Declaration of Trust, the Fund implements a risk management policy that applies the principles of Value-at-Risk (VAR). VAR is a measure of the portfolio's maximum potential loss and is computed based on price volatility and market value of the investment portfolio. The Fund's risk management policy prescribes a dynamic volatility band, such that if the volatility of the Fund's investments as reflected in the NAVpu exceeds the volatility band, adjustments are made for the collective interest of the participants. The Fund may also use financial derivatives to hedge the portfolio against market and credit risks.

Risk Characteristics

Risk Measures	Past 12 Months			
	Feb 28, 2010	Low	Hi	Average
Duration	3.56	1.98	3.66	2.82
Volatility, Past 360 Days	1.46%	1.32%	1.49%	1.40%
Sharpe Ratio, Past 360 Days	5.43			

Duration measures the sensitivity of NAVpu to interest rate movements. As interest rates rise, bond prices fall. The higher the duration, the more NAVpu will fluctuate in relation to changes in interest rates. Volatility measures the fluctuations in NAVpu. The higher the number, the higher the potential gain or loss. Sharpe ratio evaluates reward to-risk efficiency. The higher the number, the higher the reward per unit of risk.
