Fund Manager's Report

Prices of USD-denominated ROPs rose by 0.6% in April as investors' appetite for Asian dollar-denominated debt strengthened after Moody's upgraded Korea's sovereign credit rating from "A2" to "A1", and amid news of Greece's sovereign debt woes and the possible contagion effect to other European nations. The JPMorgan Asia Credit Index spreads narrowed slightly by 3 basis points to 222 by month-end. As for the Philippines, five-year ROP CDS spreads remained unchanged at the 165 level.

The Philippine government successfully issued a total of USD298Mn in 3-year and 5-year dollar-denominated Retail Treasury Bonds, also known as the "expat bonds". The success of these auctions, which were targeted primarily for overseas Filipinos, demonstrated the country's capability to raise funds from the investing public.

Against this backdrop, the Fund outperformed its benchmark and we continue to seek new investment outlets to diversify the Fund's portfolio.

Net Asset Value Per Unit

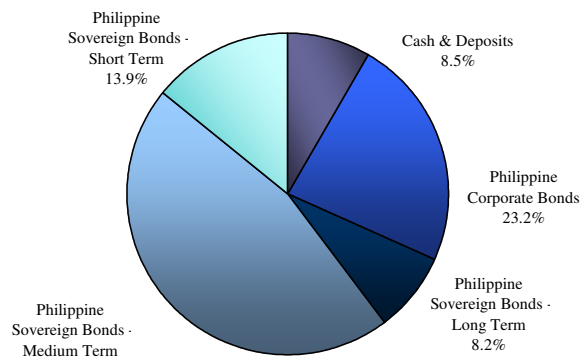

Risk Disclosure

The Fund is suitable for investors who take medium to long-term views. As a marked-to-market UITF, the Fund's yield, net asset value, and total return may fall as well as rise as a result of interest rate movements and the changes in credit quality of the investments. On redemption of units, an investor may receive an amount less than the original amount of the investment.

Risk Management

In accordance with the provisions in the Declaration of Trust, the Fund implements a risk management policy that applies the principles of Value-at-Risk (VAR). VAR is a measure of the portfolio's maximum potential loss and is computed based on price volatility and market value of the investment portfolio. The Fund's risk management policy prescribes a dynamic volatility band, such that if the volatility of the Fund's investments as reflected in the NAVPU exceeds the volatility band, adjustments are made for the collective interest of the participants. The Fund may also use financial derivatives to hedge the portfolio against market and credit risks.

Risk Characteristics

Risk Measures	Past 12 Months			
	Apr 30, 2010	Low	High	Average
Duration	2.75	2.04	3.66	2.97
Volatility, Past 360 Days	1.50%	1.32%	1.50%	1.43%
Sharpe Ratio, Past 360 Days	5.53			

Duration measures the sensitivity of NAVPU to interest rate movements. As interest rates rise, bond prices fall. The higher the duration, the more NAVPU will fluctuate in relation to changes in interest rates. Volatility measures the fluctuations in NAVPU. The higher the number, the higher the potential gain or loss. Sharpe ratio evaluates reward-to-risk efficiency. The higher the number, the higher the reward per unit of risk.
