## Fund Manager's Report

Philippine USD-denominated ROP prices declined slightly causing yields to go up by 9 bps in the month of May. Investors were wary of the continuing debt crisis in Europe, the most recent of which was Fitch's downgrade of Spain's sovereign credit rating by a notch, stripping the country of its coveted triple A credit rating. This gave credence to earlier fears of a possible contagion effect from Greece's debt problems.

On the other hand, positive reports on the local front gave a much needed boost to Philippine dollar-denominated bonds. The domestic economy grew by 7.3% year-on-year in the first quarter, and the government reported a fiscal surplus in April. In spite of this, the five-year ROP CDS spreads widened by 3.5 points, settling at the 168 level.

Against this backdrop, the Fund outperformed its benchmark and we continue to seek new investment outlets to diversify the Fund's portfolio.

## Net Asset Value Per Unit

<b>Net Asset Value, end-of-quarter</b>	<b>USD 86.02 Million</b>
<b>NAV Per Unit (NAVPU)</b>	<b>USD 235.99</b>
<b>Par Value</b>	<b>USD 100.00</b>

## Risk Disclosure

The Fund is suitable for investors who take medium to long-term views. As a marked-to-market UITF, the Fund's yield, net asset value, and total return may fall as well as rise as a result of interest rate movements and the changes in credit quality of the investments. On redemption of units, an investor may receive an amount less than the original amount of the investment.

## Risk Management

In accordance with the provisions in the Declaration of Trust, the Fund implements a risk management policy that applies the principles of Value-at-Risk (VAR). VAR is a measure of the portfolio's maximum potential loss and is computed based on price volatility and market value of the investment portfolio. The Fund's risk management policy prescribes a dynamic volatility band, such that if the volatility of the Fund's investments as reflected in the NAVPU exceeds the volatility band, adjustments are made for the collective interest of the participants. The Fund may also use financial derivatives to hedge the portfolio against market and credit risks.

## Portfolio Composition

Average Credit Rating: Ba3 (Moody's) / BB- (S&P)

## Risk Characteristics

Risk Measures	Past 12 Months			
	May 31, 2010	Low	High	Average
Duration	3.10	2.04	3.66	3.05
Volatility, Past 360 Days	1.54%	1.32%	1.54%	1.44%
Sharpe Ratio, Past 360 Days	4.86			

Duration measures the sensitivity of NAVPU to interest rate movements. As interest rates rise, bond prices fall. The higher the duration, the more NAVPU will fluctuate in relation to changes in interest rates. Volatility measures the fluctuations in NAVPU. The higher the number, the higher the potential gain or loss. Sharpe ratio evaluates reward-to-risk efficiency. The higher the number, the higher the reward per unit of risk.
