Fund Manager's Report

Philippine USD-denominated ROP bonds continued to rally as prices rose by an average of 3.88%, while bond yields declined by 44 basis points on average for the month of August. This came on the back of positive news that the Philippine economy grew by 7.9% year-on-year in 2Q2010, while GDP growth figure for the previous quarter was revised upwards from 7.3% to 7.8%.

Other economic news that propped up investor sentiment included July inflation tallying at 3.9%, below the 4.1% figure expected by market players, and the Bureau of the Treasury's successful auction for peso-denominated Retail Treasury Bonds, which allowed the government to raise PHP97.50Bn for its coffers.

Against this backdrop, the Fund outperformed the benchmark 3-month US Treasury bill for the month of August.

Net Asset Value Per Unit

Net Asset Value, end-of-quarter USD 96.15 Million
NAV Per Unit (NAVPU) USD 244.03
Par Value USD 100.00

Risk Disclosure

The Fund is suitable for investors who take medium to long-term views. As a marked-to-market UITF, the Fund's yield, net asset value, and total return may fall as well as rise as a result of interest rate movements and the changes in credit quality of the investments. On redemption of units, an investor may receive an amount less than the original amount of the investment.

Risk Management

In accordance with the provisions in the Declaration of Trust, the Fund implements a risk management policy that applies the principles of Value-at-Risk (VAR). VAR is a measure of the portfolio's maximum potential loss and is computed based on price volatility and market value of the investment portfolio. The Fund's risk management policy prescribes a dynamic volatility band, such that if the volatility of the Fund's investments as reflected in the NAVPU exceeds the volatility band, adjustments are made for the collective interest of the participants. The Fund may also use financial derivatives to hedge the portfolio against market and credit risks.

Risk Characteristics

Risk Measures	Past 12 Months			
	Aug 31, 2010	Low	High	Average
Duration	3.23	2.75	3.66	3.23
Volatility, Past 360 Days	1.51%	1.32%	1.54%	1.45%
Sharpe Ratio, Past 360 Days	5.71			

Duration measures the sensitivity of NAVPU to interest rate movements. As interest rates rise, bond prices fall. The higher the duration, the more NAVPU will fluctuate in relation to changes in interest rates. Volatility measures the fluctuations in NAVPU. The higher the number, the higher the potential gain or loss. Sharpe ratio evaluates reward-to-risk efficiency. The higher the number, the higher the reward per unit of risk.
