2007	7.20%	7.59%
Since Inception	29.35%	30.17%

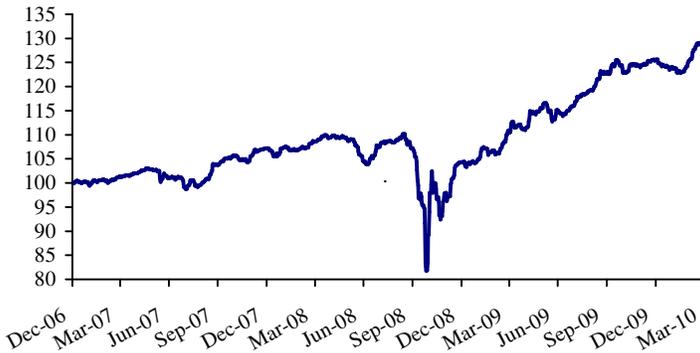

Returns are net of fees. Past Performance is not an indication of future returns.

Fund Manager's Report

Philippine USD-denominated ROPs rose by 2.5% in March as European nations came to an agreement to provide financial support to Greece, if needed. This development eased concerns about the Euro zone, and investors were more willing to take on risk as a result. Moody's Investors Services said that the country's resilient dollar inflows would support the country's full-year economic growth target of 2.6% to 3.6%. Moreover, the ratings agency's affirmation of its stable outlook for the Philippines' sovereign credit rating lent a hand in propping up ROP prices, and, together with the rise in US Treasury yields, caused spreads of ROP yields over US Treasuries to narrow by 81 bps on average. The five-year ROP CDS spreads also declined by 22 bps on a month-on-month basis, settling at the 162 level.

Against this backdrop, the Fund continued to track the JPMorgan Asia Credit Total Return Index. Investors of the Fund are advised to pursue a long-term investment horizon.

Net Asset Value Per Unit

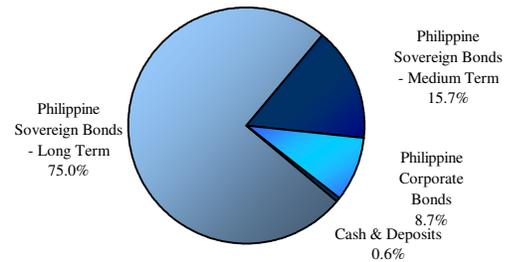

Net Asset Value, end-of-period **USD 11.93 Million**
 NAV Per Unit (NAVpu) **USD 129.35**
 Par Value **USD 100.00**

Risk Disclosure

An index tracker bond fund is suitable for investors who take medium to long-term views and want exposure to Philippine bonds. As a marked-to-market UITF, the Fund's yield, net asset value, and total return may fall as well as rise as a result of interest rate movements and the changes in credit quality of the investments. On redemption of units, an investor may receive an amount less than the original amount of the investment. Liquidity risk also needs to be taken into account.

Portfolio Composition

Average Credit Rating: Ba3 (Moody's) / BB- (S&P)

Top 10 Holdings

Security	% of Fund

Risk Characteristics

Risk Measures	Fund	JACI Phils Total Return Index
Duration	7.48	7.40
Volatility, Past 360 Days	3.97%	5.32%

Duration measures the sensitivity of NAVpu to interest rate movements. As interest rates rise, bond prices fall. The higher the duration, the more NAVpu will fluctuate in relation to changes in interest rates. Volatility measures the fluctuations in NAVpu. The higher the number, the higher the potential gain or loss.
