Fund Manager's Report

US dollar-denominated ROP prices rallied by 0.6% in November as the market found relief on the announcement that Dubai World, the state-owned conglomerate of Dubai was already in constructive talks with their bank creditors for only half and not their entire USD 59 Bn dollars in debt. Investors were reassured that Dubai's debt woes were in control and hopefully, would be an isolated case. Investors also shrugged off the latest GDP figures showing that the Philippine economy expanded by a mere 0.8% in the 3rd quarter this year which was below expectations. As remittances from overseas workers are anticipated to increase over the coming holidays, we expect this would continue to lend support for Philippine dollar-denominated debt.

Against this backdrop, the Fund continued to closely track the returns and duration of the index in November. Moving forward, we expect some volatility in bond prices to persist given recent market uncertainties. Investors of the Fund are advised to pursue a long-term investment horizon. □

Risk Disclosure

An index tracker bond fund is suitable for investors who take medium to long-term views and want exposure to Philippine bonds. As a marked-to-market UITF, the Fund's yield, net asset value, and total return may fall as well as rise as a result of interest rate movements and the changes in credit quality of the investments. On redemption of units, an investor may receive an amount less than the original amount of the investment. Liquidity risk also needs to be taken into account.

Risk Characteristics

Risk Measures	Fund	JACI Phils Total Return
Duration	6.66	6.84
Volatility, Past 360 Days	5.16%	22.08%

Duration measures the sensitivity of NAVpu to interest rate movements. As interest rates rise, bond prices fall. The higher the duration, the more NAVpu will fluctuate in relation to changes in interest rates. Volatility measures the fluctuations in NAVpu. The higher the number, the higher the potential gain or loss.
