

Philippine Dollar Bond Index Fund

A Unit Investment Trust Fund of the Bank of the Philippine Islands

Investment Objective

The Fund aims to achieve investment returns that closely track the total return of a U.S. dollar-denominated index, the JP Morgan Asia Credit Philippines Total Return Index, before fees and taxes, by investing in a diversified portfolio of Philippine sovereign and corporate fixed income instruments.

Maturity Profile

Any prospective investment shall be limited to the type of investments described in the Declaration of Trust for the Fund.

Average Credit Rating: Ba1 (Moody's) / BB+ (S&P)

Risk Disclosure

The fund is suitable for investors with an aggressive risk profile. An index tracker bond fund is suitable for investors who take medium- to long-term views and want exposure to Philippine bonds. Prior to investment in the Fund, the investor shall undergo a client suitability assessment procedure to determine whether the Fund is appropriate for him considering his investment objective, risk tolerance, preferences and experience. As a marked-to-market UITF, the Fund's yield, net asset value, and total return may fluctuate as a result of interest rate and currency movements and the changes in the credit quality of the investments. On redemption of units, an investor may receive an amount less than the original amount of the investment. Liquidity risk also needs to be taken into account.

⁴ Average Daily NAV for the past 3 months.

⁵ Tracking error is the measure of deviation between the Fund's returns and the benchmark returns. A lower number means the Fund's return is closely aligned with the benchmark.

⁶ Trust fees/management fees/custodianship fees as a percentage of average daily NAV for the quarter.

⁷ External Audit fees as a percentage of end-year NAV.

*Plan rules are available upon request.

Manager's Report

Market Review. Philippine dollar-denominated bond prices recovered in April as the market digested news of the country having attained an investment grade rating from Fitch Ratings Agency. The long-end of the yield curve benefitted the most with the 25-year ROP trading back at the 120 price level, where it was trading at the start of the year. This improvement in bond prices caused ROP yields to decline by an average of 20 basis points across the yield curve.

At the end of the month, the maturity of the Multi-currency Retail Treasury Bond (MRTB) released US\$200 million back into the market. Thus, we expected some level of bid support for ROP bonds as investors put this liquidity back to work.

All this was capped with Standard & Poor's upgrade of the country's long-term foreign currency debt to BBB- (Investment Grade) from BB+ with a stable outlook. The recent upgrade to Investment Grade status by Japan Credit Ratings (JCR) Agency only serves as an affirmation of what the country has accomplished.

Moving forward, we expect ROPs to benefit from the recent credit rating upgrades and enjoy some bid support from the investing public. We can also expect yields to decline further.

Fund Performance. Against this backdrop, the Fund returned 2.48% for the month.

Strategy. The Fund will continue to track the JPMorgan Asia Credit Total Return Index.
